

do you need to **remove dead phone numbers** from your lists?

Cityfringe specialise in solving complex technical problems for telecoms operators and corporate customers too, and we have recently developed a system that can passively check the condition of thousands of telephone numbers per hour and produce reports which can include details on the following line conditions:

- Number in service (normal working order)
- Line out of order/no such number/number not allocated etc
- Anonymous calls rejected/number not accepting incoming calls
- It even identifies lines with a "Changed Number Intercept" message on them !

Years of experience in the telecoms industry helps guarantee this is all done automatically WITHOUT A SINGLE TINKLE on the subscribers telephone handset – the subscriber is completely unaware that their line has been "sniff tested" - WHY ? because we NEVER actually call them !. Subscribers are NEVER denied service (ie Dial Tone) at ANY stage during testing because our unique STEALTH technology uses a specially designed combination of hardware, Telco protocols and software that allows us to "sniff test" the condition of any UK (and some European) landlines.

OUR PROMISE - NO GHOST CALLS and NO COMPLAINTS - EVER !

note: not to be confused with "pinger" systems which actually attempt to make a live phone call to to each number.

BUSINESS COMMUNICATIONS TECHNOLOGY EXPERTS

TEST YOUR NUMBERS!

Test your numbers with us and enjoy fast accurate results.

100% legal and fully compliant, our unique stealth technology is in a class of its own.

List User?

this solves problems of:

- wasted time and money with telesales agents calling dead numbers
- don't pay for dead numbers, we can provide a definitive 'dead' list, for quantifying refunds from your broker.

List Broker?

this solves problems of:

- client complaints and 'how do we know this is a good list' questions.
- closing sales - offer a guaranteed 100% good contact list for value-added mail-outs.*

BECOME A RESELLER!

We are interested in talking to potential re-sellers of this service. On-going revenue share available to regular introducers of business.

Our pricing is fair and simple:

End users are charged 3 pence (+vat) for each UK landline number tested, with a negotiated commission payment plan for agencies introducing regular business.
